

# True-Galv™

**True-Galv™ It's the real deal in galvanized tubing!  
Don't settle for less!**

We offer a wide range of sizes in **True-Galv™** galvanized square and rectangular mechanical tubing manufactured to ASTM A787-09 AWG. We **start** with **continuously coated hot dipped** galvanized coil manufactured to your specified coating weight, spangle, and finish. Then we form and weld the tube to precise dimensions followed by a proprietary thermal application of zinc to the seam. The finished tube is then saw cut to mill length and is ready for your production line or can be further processed at our facility. With our short side seam location on our rectangular product line you have control of seam exposure on your products.

Contact us today with your requirements.  
Let's talk about the **True-Galv™** difference.

**True-Galv™ It's the real deal in galvanized tubing!**

Our product lines conform to the following specifications:  
ASTM A787-09 AWG  
ASTM A500-10a Grades A,B,C,D  
ASTM A513-08a upon request
